Dear Applicant:

This refers to the above-captioned license application filed to cover your construction permit BPED-831216BU (granted June 17, 1988).

An engineering review of your application reveals the following discrepancies:

- 1) Radiation center above ground level and radiation center above mean sea level are not specified in Section 11-B, Item 7.
- 2) Overall tower height above ground reduced from 152 meters (including obstruction lighting) on construction permit to 145 meters on license application.
- 3) Rated efficiency for the Andrew transmission line listed in Section 11-B, Item 8 of your application as 74.61%. However, the Commission's calculated rated efficiency for this type of transmission line is 74%. This discrepancy must be resolved so that your transmitter power output (TPO) can be verified. Please note that based on the efficiency of 74%, your TPO would be 1.0 kilowatt and not 0.62 kilowatts as specified in your application.

Further action on the subject application will be withheld for a period of thirty days from the date of this letter to provide you an opportunity to reply. Failure to respond within this time period will result in a suspension of program test authority pursuant to 47 C.F.R. § 73.1620(b). Please note

that the amendment must be submitted in triplicate to the Secretary of the Commission and signed in the same manner as the original application.

Sincerely,

Dennis Williams
