

Honored Commissioners,

I support the comments of the Amateur Radio Safety Foundation, and ask that you implement a 2.8-3.0 Kiloherz bandwidth limit, rather than unlimited bandwidth. I also would like to point out that ARDOP has several programs that use it that are not related to Winlink. It is also available in source code form through the ARDOP discussion groups that I established on groups.io and through either the TNC-X website run by Coastal Chipworks or John Wiseman G8BPQ, who is the author of the C source version.
