To Whom It May Concern:

Rapid Systems has been a provider of internet to central Florida for over 20 years. Providing broadband to our numerous customers in rural areas of critical economic concern has been a goal of Rapid Systems. These end users have the greatest need for services. We have millions in dollars investment into the 3650-3700 MHZ band in the form of engineering, planning, equipment, jobs, and servicing.

Rapid Systems will not have enough time to move our thousands of users in a smooth transition from 3650-3700 MHZ to the CBRS, resulting in loss of service for many users.

Furthermore the equipment for CBRS / as well as the SAS infrastructure is not fully baked, which can take months if not a year to work out all bugs.

We support the extension requested in the Petition of Waiver filed by WISPA. We feel the best option would be extending 3650-3700MHZ while opening CBRS in order to have an optimal rollout of new equipment that can be monitored and customers can enjoy quality internet.

Thank you,
