

I understand that Large scale testing of CBRS will not start until mid 2019. At this time, considering the expansiveness of my network using 3.65 GHz, it will be a tremendous financial burden to convert my entire 365 network in less than a year.

I am a very small WISP, fewer than 100 subscribers serving rural Switzerland and Ohio counties in Indiana. I would much rather continue putting my resources in improving the internet experience for my customers and expending to reach more people who are presently unserved, or underserved with broadband service.

I am in full support of WISPA's petition with the FCC to extend the April 17, 2020 deadline for converting all of my 365 gear to CBRS operation. This will allow me to plan better in providing a respectable internet experience for all my present and future customers.
