

- I strongly support net neutrality backed by Title 2 oversight of ISPs.
- I object to Internet providers being allowed to determine what content gets slowed down and what content gets speed up when downloading through their internet service.
- I am a paying consumer in a rural northern Michigan area that doesn't have options for providers, Charter is the only High Speed Provider and I am deeply concerned that this legislation will encourage corporations like Charter to manipulate consumers and charge higher rates than necessary to get the same quality of services previously provided.
