Comments re: Proceedings: 17-258

Our company opposes any changes to the current CBRS rules. As a 21+ year old rural based hi-tech company, we have recently invested around \$250K to better serve our community with 50Mbps fixed wireless. This investment (and near future investments) are based upon the current CBRS rules.

As a company focused on hiring local "small town" talent and Veterans, we serve thousands of customers around Lake LBJ west of Austin, TX. Our family has worked very hard to protect and serve our customers. We currently install Fire Alarm Systems, Security, Surveillance, Satellite TV, WiFi and Home Automation to Lakehouse and Ranch Owners.

The weakest link in our customers' "integrated" homes is the local, rural incumbent ISP's/WISP's, therefore, we decided to borrow the money and provide LTE 3.65Mhz to our customers and others. This investment was made based upon the current CBRS rules with the expectation that the rules would not change.

We are launching our high power internet service January 15th, 2018. This high speed service will be available to around 50% of our service market, with plans to invest and hit 100% within the next 24 months.

We are able to provide homeowners and businesses broadband internet today and expand this coming year with the current rules. Any rule changes will cause further delays in expanding new broadband internet access in our service area and other WISP's service areas.

The proposed rule changes definitely favor large companies. The much larger proposed PALs are outside of our service market and would require substantial additional investment, thereby lowering our ability to stand "toe to toe" the auction. If the new rules are adopted, then we, and other small market WISP's, will suffer and may be forced out of the internet business. My current and future customers will not be happy with the proposed changes that only cause delays and create monopolies.

Sincerely,

Kenny Thompson
