Please Save 2015 CBRS Rules. As a small company who has been seeking the benefit of rural American and providing them with internet long before it was fashionable to do so, we have already made significant investments in gear to make use of the current CBRS rule proposal. To change them and make the price out of the reach of the mid-size WISP that is providing service to the rural areas will be a mistake and will hinder the growth in this area.

Think about it. If the at&t, T-Mobile, etc... could not provide service to the rural areas with all the frequency and capital they have on hand now. How is changing the rules to help them and limit the effectiveness of those who are providing the service make any sense.

Keep Priority Access Licenses on Census Tracts.  
Keep License Terms at 3-5 years.

Thanks,
