Thomas E. Wheeler
President / CEO

Dear Chairman Hundt:

I enclose a copy of the Cellular Telecommunications Industry Association's ("CTIA") PCS White Paper Number 5, entitled *Financing the Wireless Marketplace: How Smaller Blocks of Spectrum and Geography Can Build A Better Industry*.

This White Paper calls upon the Federal Communications Commission to recognize that as technology advances the need for large spectrum blocks recedes, and that consequently delivery of Personal Communications Services (PCS) does not require blockbuster spectrum grants and geographic megamarkets.

As the White Paper notes:

MCI's recent commitment of \$ 1.3 billion for a 17 percent share in NEXTEL Communications -- a company using an average of 10 MHz per market -- demonstrates the faith of investors and the financial markets in companies using small spectrum blocks.

In fact:

- Companies actually using spectrum blocks as small as 10 MHz have demonstrated they are sufficient for advanced wireless services.
- A majority of parties to the PCS proceeding support smaller spectrum blocks of 20 MHz or less, citing both technical and economic reasons for these building blocks.
- A 10 MHz and 20 MHz allocation regime is more consistent with the Commission's mandates of competitive service delivery, technological innovation, and spectrum efficiency than the current regime.

May 9, 1994
Page 2

Modifying the PCS Second Report and Order to create four 20 MHz blocks while maintaining four 10 MHz blocks will encourage capital investment, foster the development of sustainable companies, and create new job opportunities in the vital telecommunications sector.

This refinement of the PCS regime will provide parties with what the *Second Report and Order* described as the "flexibility to match an applicant's specific needs with spectrum [and] should promote efficient use of the spectrum resource."

Very truly yours,

Thomas E. Wheeler
