RE: GN Docket 93-252: Nextel's Request for National ESMR Exclusive

To Whom it May Concern:

RMTV, Inc., is owned exclusively by the undersigned, past President of a very large building supplies firm, who has been a part owner of a number of cellular telephone systems and many other businesses, and one who has the resources and relationships necessary to build and operate SMR and ESMR systems. RMTV, Inc. is also an SMR licensee and is an applicant for SMR licenses in many medium to smaller U.S. markets. Thanks to my attorney, I have been alerted to Nextel's latest "spectrum grab" attempt. Comments follow.

Nextel is already far and away the largest SMR firm in the nation, plus it owns 40% of OneCom, the next largest SMR firm. Motorola, the apparent "guiding hand" behind the entire industry, owns 20% of Nextel, OneCom and Dial Page, along with well over half of the dispatch firms in the nation. Nextel is, therefore, already "in bed" with every existing SMR firm of any size (the "Nextel Clique") except Pittencrieff, and the latter, although much smaller, would also benefit from Nextel's MTA monopoly plan.

Now, to increase its fast-becoming total dominance of SMR. Nextel seeks 100 more channels per market, the expansion of its market size from 25 mile radius to statewide, and the ability to shove any would-be SMR-ESMR newcomers (or non-Nextel Clique entity), which are the only remaining possible competitors to the Nextel Clique, into a lower spectrum with a 25 mile radius service area. What a joke! SMR-ESMR will then be known as "The Nextel Industry", surpassing McCaw, the RBOC's, etc., in this final stroke the FCC's pen. Nextel may have many friends in high places but this is becoming ludicrous.

If the marketplace means anything to the FCC, if competition has any attraction to The Clinton Administration, then, Nextel's proposal should be denied, therefore giving smaller SMR firms and long-standing applicants the chance, at least, to give the public some options to the Nextel/OneCom/DialPage/Motorola complex. If the FCC will allow us, we'll do exactly that — and watch the rates to the public drop while the services increase!

Respectfully submitted,

RMTV, Inc.

Roy J. Murphy
