Re: Ex Parte Presentation Concerning
CC Docket No. ~~94-237~~ and IAD File Nos. 94-102 and
94-104

Dear Mr. Caton:

On Thursday, May 18, 1995, the Cellular Telecommunications Industry Association ("CTIA") delivered the attached draft proposal to Mr. James R. Keegan, Chief of the Common Carrier Bureau's Domestic Facilities Division, and to Ms. Linda Dubroof, Ms. Elizabeth Nightingale, Mr. Michael Specht and Mr. Scott Shefferman, all of the Domestic Facilities Division.

Pursuant to Section 1.1206(a)(1) of the Commission's Rules, an original and one copy of this letter and attachment are being filed with your office. If you have any questions concerning this submission, please contact the undersigned.

Sincerely,

Randall S. Coleman

Dear Jim:

As agreed, I have attached for your review a copy of CTIA's draft proposal with respect to the establishment of a new administrator of the North American Numbering Plan. This proposal will be the subject of the meeting between your office and CTIA on Wednesday, May 24, 1995, at 2:00 p.m. Courtesy copies have been distributed to those persons listed below. A copy of the draft proposal has been filed with the Secretary's office in accordance with the Commission's ex parte rules.

Please call if you have questions.

Sincerely yours,

Randall S. Coleman

DRAFT

PROPOSAL FOR CREATING THE U.S. NUMBERING ASSOCIATION

The FCC should immediately create the United States Numbering Association (USNA) to administer the U.S. numbering resources of World Zone One.¹ The following areas highlight the overall plan for establishing the USNA.

1. Location

The USNA would be based in Washington, DC to enhance its working relationship with the FCC and the various associations representing the telecommunications industries.

2. Representation

Due to Canadian and Caribbean sovereignty issues,² the USNA should only administer the resources of U.S. carriers. The USNA would coordinate assignments with their counterparts in other Zone One nations.

A Board of Directors would be established, inviting a minimal complement of representatives from each telecommunications industry segment that utilizes numbering resources. This would encompass Wireless Service Providers (WSPs), Local Exchange Carriers (LECs), Interexchange Carriers (IXCs), Competitive Access Providers (CAPs), and others (e.g. cable, payphone, satellite industries). Board member selection would be facilitated by the FCC working directly with the key associations representing the specific industry segments. A cap on representation would be established, to prevent an oversized Board. Members of the FCC could act in an advisory capacity during the formation and initial meetings of the Board. Once the USNA were fully operational, FCC interaction would be minimal.

3. Staffing and Office Requirements

Presently, five staff members perform the NANPA functions. Each RBOC also provides staff to assign NXXs at the regional level. Considering efficiencies gained by putting all assignments into one office, it is estimated a ten-person staff could handle the assignments. An Executive Director would lead the effort. Additional research is needed to determine the specific staff responsibilities and compensation levels, and project staff growth.

¹ World Zone One is composed of Bermuda, Canada, the United States and the Caribbean islands in the 809 NPA (i.e., Anguilla, Antigua, Bahamas, Barbuda, Barbados, British Virgin Islands, Carriacou, Cayman Islands, Dominica, Dominican Republic, Grenada, Jamaica, Monserrat, Nevis, Puerto Rico, St. Kitts, St. Lucia, St. Vincent and the Granadines, Trinidad and Tobago, Turks and Caicos Islands, and the U.S. Virgin Islands).

² The Canadian government has established an elaborate, though often criticized process for administering their numbering resources. The CRTC, Industry Canada, and the Canadian Numbering Administrator work together and with telecommunications service providers on numbering issues. It would be best if the Canadian, U.S., and other countries would work together in international numbering strategies in lieu of the U.S. attempting to assume and/or assert control over another country's domain.

DRAFT

All numbering assignments would be done through computerized databases, based on uniform assignment criteria adopted by the Board of Directors.³

Staffing requirements would take into account travel expectations to participate in national (INC) and international (ITU) numbering forums.

4. Funding

Funding for the USNA would be provided by the users of the numbering resources: WSPs, LECs, IXC, CAPs, and others. With additional research, a budget would be developed to account for projected staffing, overhead, expenses, and revenue. Initial funding would be provided through assessments to carriers, based on their numbering resources in use. Regular funding for operating revenue would be derived from assignment fees.

- A. Initial funding for development and creation of the USNA would be provided by the current numbering resource users and would be based on the formula below.⁴ Since the majority of work to be performed would be administering NPA and NXX codes, initial funding of the USNA would be based on the number of NXXs currently in use.⁵ For smaller carriers that share an NXX, the formula could be adjusted.

Initial Carrier Funding of the USNA			
USNA Budget	÷	Total Number of All Carrier's NXXs	X Funding Carrier Number of NXXs

- B. Regular funding of the USNA would be based upon a rate structure to be developed, and based upon a fee per number assignment. NPA and NXX code assignment fees would be the primary income for USNA. A complete fee schedule would be developed for all assignments (see list below).

³ Two groups under the LEC-governed Alliance for Telecommunications Industry Solutions (ATIS) have developed numbering proposals. The Industry Numbering Committee (INC) has developed NPA Relief Planning Guidelines, and the Industry Carriers Compatibility Forum has developed NXX Assignment Guidelines. Pending review, these documents could be useful in developing USNA guidelines. ATIS' governance remains LEC controlled, despite requests from CTIA to broaden its scope. WSPs have participated in drafting the current numbering guideline documents.

⁴ This initial carrier funding mechanism is similar to the CTIA funding mechanism for Fraud Assessments and Health & Safety Assessments, based on member spectrum and pops.

⁵ For a simpler initial funding alternative, each USNA Board member company, or the association they represent, would pay a flat fee for the privilege of sitting on the Board.

DRAFT

5. Numbering Assignments

The USNA's primary responsibility would be assigning NPA and NXX codes. These, and other numbering resources for which a fee would be charged include:

- a) NPA (area) codes:
 - for the United States, Canadian provinces, and other locations,
 - N00 codes (e.g. 500, 800, 900 area codes), and
- b) NXX (central office) codes
 - in the 809 NPA, for Caribbean nations,
 - in the 456 NPA for routing of inbound international calls,
 - in the U.S.⁶ and Canada, and
- c) Carrier ID Codes (e.g. 10-XXX codes); and
- d) SS7 network codes

Other numbering assignments are currently performed by other entities representing telecommunications service providers, as noted below. Further research is necessary to determine the need and feasibility of putting their assignment under the USNA.

Numbering Assignment	Responsible Entity	Length	Purpose
System Identification (SID)	FCC	5	Identify market-level licensed wireless service providers.
ESN Manufacturer Prefixes	FCC	3	First 3 digits of an 11-digit ESN, which identifies the mobile unit manufacturer.
Billing Identification (BID)	CIBERNET Corporation	5	Identifies the wireless service provider responsible for billings to a particular NXX. The BID is often a SID subset.
Carrier Identification Number	CIBERNET Corporation	3	Identify wireless service provider companies.
Non-dialable numbers	none - WSPs arbitrarily assign #s to themselves. CIBERNET tracks usage.	3	Unique area codes, outside the range of NANP, used by wireless carriers to identify mobile units of unique application, specific to their geographic markets e.g. UPS courier tablets.
Operating Company Code (OCN)	National Exchange Carriers Association (NECA)	3	Identify mainly LECs & IXC's for message routing and rating purposes. WSPs have started using OCNs for message processing with LECs.
Revenue Accounting Office (RAO)	Bellcore	3	Used by LECs & IXC's to identify themselves as the recipient of billings. Similar to SID or BID.

Because some of the numbers above are industry segment-specific (i.e. CIBERNET BIDs, and Bellcore RAOs), it would be ideal for the responsible entity to continue as the assignor. In the future however, as technologies converge, traditional industry segmentation will blur.

⁶ RBOCs presently assign NXXs to service providers in their territories. The USNA would take over this responsibility.

DRAFT

Wireless and landline service providers will likely be exchanging call record and billing information more frequently. This will necessitate a more uniform assignment of the various numbering codes to facilitate intercarrier routing and exchange of messages.

Summary

Multiple telecommunications industry segments now benefit from numbering assignments. The methods and entity currently employed to administer numbering resources are outdated and require immediate change.

The FCC should immediately establish the U.S. Numbering Association (USNA) to administer the numbering resources of World Zone One. The USNA would be a Washington, DC-based staff of approximately ten persons, overseen by a Board of Directors comprised of representatives from all telecommunications service providers. The USNA would be funded by assignment fees for numbering resources which telecommunications service providers require.
