Re: RM-8653

I support Apple Computer's "NII Band" proposal.

It would permit competition to the local telephone companies, and thus allow the local telcos to rightfully claim that it's time they be allowed to compete in other businesses, such as long distance.

The NII Band might achieve enough throughput to permit competition to the cable tv companies, as well, if the communications protocols are cleverly designed to allow one-to-many broadcasting.

I've read several comments filed by others in support of Apple's proposal, and I echo them as well.

Please take into consideration that there are still parts of the country with party lines and that we consider ourselves fortunate to have these.

We would appreciate any help we can get to provide wireless transmission to our outer islands. Thank you for taking into consideration our view over the Internet.

RM-8653

DOCKET FILE COPY ORIGINAL

As a private citizen with interests in communication and technology, I find petition RM-8653 to be in the public interest. I feel that it will encourage invention and technological development by allowing many companies and individuals (not just one or a few) to develop competing equipment for use in this area.

This petition will allow many people to access the information currently available and make more information available by enabling more people to provide it. Licensing the spectrum or restricting it to one or a few companies would restrict those able to access information and prohibit many from providing information.

As our society moves away from traditional methods of storing and accessing information, the National Information Infrastructure is becoming more important. Making access to the NII available to everyone means making it affordable to even the lowest income families and individuals and making it convenient for everyone.

I strongly encourage you to consider adopting this plan.
