Subject: AGAINST Petition RM8648 (WINForum) 9/16/95

To Secretary, Federal Communications Commission:

Please do NOT support F.C.C. Petition RM8648, being proposed by WINForum, a group of commercial network service providers. It is an attempt to water down Apple Computer's proposal (RM 8653). The end result would be that any National Information Infrastructure (NII) would be virtually useless to the public.

DOCKET FILE COPY ORIGINAL FEDERAL COMMUNICATIONS COMMISSION
OFFICE OF SECRETARY

Subject: RM-8648

This is to inform you that I am in full support of the Apple proposal before you for the establishment of RF network that will give unlimited free access to the Internet and other personal communications services. It is high time that the communications monopoly that the FCC and the megalopolis communications companies have conspired to create in this country is broken up and dispersed, let the little guy have a chance.

The airwaves are free and should not belong to any one group or person for the pure monetary exploitation thereof. I fully deplore the FCC's selling off to the highest bidder RF spectra and thereby shutting out any possible attempt at free market competition from other possible service providers. The cellular phone market being a prime example.

Let the people speak freely.
