Subject: Internet telephony

DOCKET FILE COPY ORIGINAL

Since you are specifically barred from any exercising any regulatory power over the Internet, you must refuse to consider

ANY petition to regulate Internet telephony, videoconferencing, or any other technology with applications not specifically mentioned in the Telecommunications Act of 1996, or otherwise, if said technologies are Internet related.

Furthermore, as stated under U.S. law, your primary objective is to act in the public interest. Any regulatory effort on your part that inhibits innovation or increased competition that does not harm the greater good of the American people is illegal, immoral, and forbidden.

Sincerely,

Jesse Rice

FEDERAL COMMUNICATIONS COMMISSION
OFFICE OF SECRETARY

In reference to Rulemaking No. 8775, please reject ACTA's petition to halt the use of Internet telephony. The current generation of Internet Telephony products do not interconnect with the existing phone systems.

DOCKET FILE COPY ORIGINAL

The ACTA's petition is another attempt by our country's economic and governmental power structure to destroy the promise that the Internet holds for personal freedom and postindustrial social relationships. The telecommunications supercompanies want to kill freetel because of it's circumvention of their monopolistic hold on the telephone industry while certain sectors of the federal government see another potential usurption of their censorship and monitoring powers over the thoughts of the American people. If someone chooses to provide free long distance communication who is the FCC to stop it? No government or private agency has any right to censor, control, or monitor the thoughts and communications of the internet community. This reminds me of the man being prosecuted for selling national security secrets because he sold the unbreakable encryption codes to non U.S. military/industrial concerns. The Federal government must be precluded, at all costs, from putting his hand and eye and ear into the flow of communication and information over the world wide web.

Alan Bradley

It seems to me that the telecommunication companies want to play on both sides of the fence. The federal government passes a sweeping bill that allows telecommunication companies to enter into other markets that were previous forbidden to it under the then current law. Now a new product comes along that uses the internet for phone purposes, and they cry foul! Which is it? Do they want to stay in the phone business and be an oligopoly or do they want to compete in other businesses as well. Internet Phone and other services are alot like CB radio's or Ham operators. Why haven't they screamed to squash these avenues in the past? Besides have they tried Internet Phone? I don't see it having the quality like Sprint Uses in their ads. "You can hear a pin drop." With Internet Phone it's more like dropping a bowling ball!

Thanks

Curt Starr

Like the rest of the government, who ever has the bucks gets what they want...thats the story with the entire government. By the way, the so called government that we the people elect are nothing but a bunch of puppets whose strings are held by the few.

America, Land of the free...ha!

The whole fregin world is corrupt and it's just getting worse each day.

So now, go ahead and take your money and ban Internet Telephone programs, God forbid I make a call to Japan and not get charged for it.

How do puppets move
