Subject: Against Fee Increase

I am against the proposed fee increases of second telephone lines, data lines (i.e. internet access lines) and wireless services (cellular, paging). Communication expansion in this country (and the world) is at a new era. Denying people the chance to experience this new technology because of government surcharges is just irresponsible. Competition in the communication industry is just beginning to make all types of communication affordable and practical to all types of people, but ANOTHER FCC surcharge is just not right. I already have to make sacrifices in order to be able to access the internet, but I would surely disconnect from it if I had to pay any more for access. It just would not be affordable!

Sincerely,
Tom Runge
