Re: Docket number 95-116

Dear sir or madam:

My partner and I have recently developed a software/hardware invention that the FCC may find of interest. This invention not only solves the present national area code problem by efficiently increasing the capacity of the North American Numbering Plan, it will also allow users to keep a universal number and allow the phone companies to meet future telecommunications needs well into the 21st century.

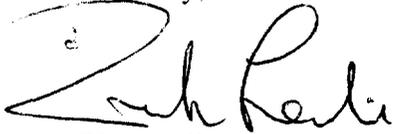

We would like to set up an initial meeting to introduce you to our invention—and to see if the NANC would be interested in pursuing its applications.

To date we have not exposed our invention to any company in the telecommunications industry. But it has gotten more than a favorable response from the handful of individuals we have shared it with. Fact is, one network news TV correspondent thinks our invention is so ingenious and user-friendly he is planning to do a story on it.

Before we reveal it to the general public, however, we would like to give all pertinent parties in the telecommunications industry a chance to respond first.

If you'd like to see how our invention works, please respond by certified mail as soon as possible to the address below.

Cordially,

Rick Leslie
President
