Attn: Magalie Salas

From: James M. Hicks - KG4K  
312 West Carver St.  
Durham, NC 27704

Dear Sir:

Here are a few signatures from some concerned amateur radio operators about RM-9259. There was very little time to organize and get comments. However I can certify that over 90% of the amateurs I talked to were in agreement with this petition and readily signed. The other 10% were not in disagreement, most of them just didn't know enough about it. I also tried to contact ARRL several month ago and they ignored any comments. My main concern is that RM-9259 will become a technological impediment.

Thank You,

*James Hicks*

Comment on RM-9259:

We the undersigned do not want RM-9259 made part of the official FCC rules and regulations. We feel RM-9259 is not the way to manage our VHF & UHF bands. In effect RM-9259 assigns private individuals and groups exclusive use of our frequencies, resulting in gross mismanagement of our resources. We certainly do not wish to legalize and grant any further authority to the repeater associations. Our resources are not being used because of this mismanagement. It is our feeling that our frequencies should be available for use by all licensed amateur radio operators.

We certainly do not wish to legalize and grant any further authority to the repeater associations. Our resources are not being used because of this mismanagement. It is our feeling that our frequencies should be available for use by all licensed amateur radio operators.

To: FCC

From: Concerned Amateur Radio Operators

Comment on RM-9259:

We the undersigned do not want RM-9259 made part of the official FCC rules and regulations. We feel RM-9259 is not the way to manage our VHF & UHF bands. In effect RM-9259 assigns private individuals and groups exclusive use of our frequencies, resulting in gross mismanagement of our resources. We certainly do not wish to legalize and grant any further authority to the repeater associations. Our resources are not being used because of this mismanagement. It is our feeling that our frequencies should be available for use by all licensed amateur radio operators.
