

Termination Service

CLASSIC SWITCHED SERVICES[®]

Termination Service provides a cost-effective solution for terminating traffic that originates on a carrier's network.

Dedicated-access locations are connected to WorldCom's nearest Presence (POP) via T-1 access. Termination is available for US and international traffic.

Features

- Worldwide termination to any direct-dialed telephone.
- US calls billed in six-second increments, six-second minimum per call.
- International calls billed in six-second increments, 30-second minimum per call.
- Rates FOB to the nearest WorldCom POP.
- T-1 access only; minimum usage charge per T-1¹.
- 80 percent of minutes must terminate to Bell Operating Company tandems².

- Hardware answer supervision: you are not billed for unanswered calls.
- Directory assistance.
- Term and volume discounts.
- Supersaver LATAs.

Options

- Call Detail Records (CDRs) available through various media, e.g., magnetic tape, CD ROM, electronic file.
- Daily, weekly and monthly frequencies.

¹ Usage may be averaged for multiple T-1s and aggregated with Toll Free Origination Service to determine if T-1 minimum usage requirements are met.

² Charge of \$0.015 is assessed all traffic over the limit if non-Bell tandem minutes exceed 20 percent.

Toll Free Origination Service

CLASSIC SWITCHED SERVICES™

Toll Free Origination Service allows your customers to originate toll-free calls on the WorldCom network from anywhere in the North American Numbering Plan (NANP).

With Toll Free Origination Service, you provide termination to your end user's premises equipment.

Features

- Intrastate rates are standard carrier dedicated-access tariffs.
- T-1 access only; minimum usage charge per T-1¹.
- 80 percent of US minutes must originate from Bell Operating Company tandems².
- FOB to the nearest WorldCom Point of Presence (POP).
- Call-blocking from designated Numbering Plan Areas (NPAs).
- Term and volume discounts.

Options

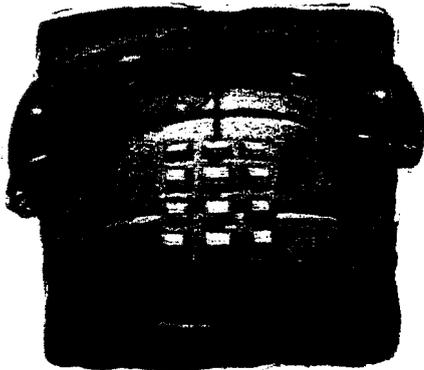

- Dialed Number Identification Service (DNIS).
- Real-time Automatic Number Identification (ANI) delivery.
- Toll-free management service.

¹ Usage may be averaged for multiple T-1s and aggregated with Termination Service to determine if T-1 minimum usage requirements are met.

² Charge of \$0.015 per minute is assessed all traffic over the limit if non-Bell tandem minutes exceed 20 percent.

Toll Free Service

CLASSIC SWITCHED SERVICES*

Toll Free Service provides end-to-end call origination and termination. Traffic is originated from anywhere in the United States, Puerto Rico, the US Virgin Islands and Canada for termination to your end user's premises equipment.

Toll Free Service is priced the same as outbound—no premiums. WorldCom can provide full-service management of all toll-free features and applications you use.

Features

- Intrastate rates are standard carrier intrastate tariffs.
- Call-blocking from designated Numbering Plan Areas (NPAs).
- Electronic order entry via the WorldCom Electronic Data Exchange (EDE).
- Term and volume discounts.

Switched Access

- Toll-free service delivered to end user's Automatic Number Identification (ANI).

Dedicated Access

- Toll-free service delivered to T-1 between end user's premises equipment and nearest WorldCom Point of Presence (POP).

Options

- Dialed Number Identification Service (DNIS).
- Real-time Automatic Number Identification (ANI) delivery.
- Call Detail Records (CDRs) available through various media, e.g., magnetic tape, CD ROM, electronic file.
- Daily, weekly and monthly frequencies.

Enhanced Toll Free Service

CLASSIC SWITCHED SERVICES™

Enhanced Toll Free Service provides customized toll-free call-routing features. Traffic is originated from anywhere in the US, Puerto Rico, the US Virgin Islands and Canada for termination to the end user.

Enhanced Toll Free Service carries a minimal installation and maintenance charge, depending on the number of features selected.

Applications

- Service and call-center routing.
- Increasing service hours.
- Distributing workload.
- Minimizing busy signals.
- Increasing call-center productivity.

Features/Benefits

- *Message Referral* ensures that callers are referred to the new toll-free number when service is terminated on an existing toll-free number. This prevents end-user confusion and increases traffic to the new number.
- *Call Area Selection* increases target-marketing capabilities by allowing user to specify from where toll-free calls can be received.
- *Geographic Routing* provides user with capability to specify multiple points of termination based on the call's origin. Calls originating from a specific region can be routed to a particular location.
- *Time of Day Routing*: terminating location of the toll-free call is based on the time of day, reducing costs and extending hours of operation by routing calls from a single toll-free number to locations in different time zones.
- *Day of Week Routing* allows users to define the terminating location of the toll-free call based on the day of week.

- *Day of Year or Holiday Routing* allows for a toll-free number to be routed to a specific termination point based on the day of year, increasing the capability to plan and staff for fluctuations of call volume on specific holidays.
- *Percent Allocation* provides the capability to route calls to two or more terminating locations based on a customer-specified percentage, allowing incoming toll-free traffic to be balanced among service centers.
- *Call Distributor* allows dedicated-access customers to spread incoming toll-free traffic evenly over three dedicated-access lines in a trunk group. Default setting is "most idle." Customer can choose "least idle," "ascending" or "descending."
- *Route Completion* provides the capability to reroute dedicated-access traffic to predefined alternate routing groups, minimizing revenue loss due to busy lines.
- *Dialed Number Identification Service (DNIS)* permits identification of a specific dialed toll-free number when toll-free numbers terminate in the same location.
- *Real-time Automatic Number Identification (ANI)* allows customers to receive the telephone number of the calling party.

Above features may be ordered individually or collectively.

Options

- Call Detail Records (CDRs) available through various media, e.g., magnetic tape, CD ROM, electronic file.
- Daily, weekly and monthly frequencies.
- Toll-free management service.

International Toll Free Service

CLASSIC SWITCHED SERVICES™

International Toll Free Service (ITFS) provides overseas customers access to businesses in the US at no charge to the caller.

ITFS gives you the opportunity to increase billed international minutes. This service also can be used to provide other international voice products.

As the world moves toward a global economy, ITFS is a convenient way for American businesses to effectively penetrate foreign markets.

Features

- Increased accessibility to international markets.
- Toll-free access for maximum convenience.
- International origination to US termination.
- Switched or dedicated access.
- Supports 58 foreign dialing patterns.
- Pricing not time-of-day sensitive (except for Mexico).
- No minimum/penalty.
- No installation.
- No monthly service charges.
- Term and volume discounts.
- Billed in six-second increments with a 30-second minimum.

Options

- Dialed Number Identification Service (DNIS).

Travel Card Service

CLASSIC SWITCHED SERVICES™

Travel Card Service is an easy-to-use service which permits your traveling customers to call from anywhere in the United States and Canada. This service is designed to enhance your existing long distance service offerings and permit routing of travel-card calls over the WorldCom digital network.

Travel Card Service allows calling to international locations which can be made available for your entire customer base or for selected authorization codes.

Features and Benefits

- *Reorigination* for making multiple calls without having to redial toll-free and authorization numbers.
- *International termination* for worldwide connectivity.
- *Toll-free access* for maximum convenience.
- *No surcharge on any calls* encourages greater traffic.
- *Easy-to-use, secure, 14-digit authorization codes and a superior fraud-detection system* for your and your customers' peace of mind.
- *Voice prompts* for easy-to-follow dialing instructions.

Options

- Volume discounts.
- Private-label cards with WorldCom authorization codes.

Enhanced Travel Card Service

CLASSIC SWITCHED SERVICES™

Enhanced Travel Card Service gives your customers the ability to be more productive while away from the office.

A secure, customized, 14-digit authorization code provides access to a variety of valuable services and features.

Applications

- News and financial reports.
- International travel.
- Multiple calls at one sitting.
- Multiple parties at one time.
- Leaving and receiving messages.

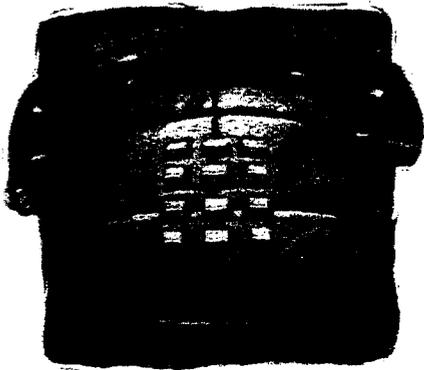

Features/Benefits

- *Direct-dial termination* to the US and international locations.
- *Toll-free access* for maximum convenience.
- *Customized greeting* gives you brand equity with your end user.
- *Speed dialing* for more efficient access.
- *International origination* for convenient travel.

- *Operator-completed calls to international points* to help customers place calls and avoid fraud.
- *Conference calling* so customers can attend meetings while away.
- *Credit limits* so you can better manage expenses and reduce exposure.
- *14-digit authorization code* helps prevent fraud.
- *Pound reorigination* so that calls can be made continuously without having to redial toll-free and authorization numbers.
- *Audio text* for access to timely information on a variety of subjects, including financial information, stock updates, and even weather updates.

Universal International Freephone Number

CLASSIC SWITCHED SERVICES™

Universal International Freephone Number (UIFN) Service provides toll-free calling from anywhere in the world to the US.

UIFN simplifies your international sales and marketing efforts by providing one number that identifies your company or your customer's company.

International expansion has never been easier or more cost-effective.

Benefits

- A single customer number throughout the world.*
- The opportunity to embed an existing 8XX number in a global toll-free number.
- Stable dial plan/consistent dial format: Originating Country's International Access Code + 8XX-XXXX-XXXX.
- Savings in advertising by using the same number in multiple countries.
- Portability between carriers.

* Where available for foreign termination.

Features

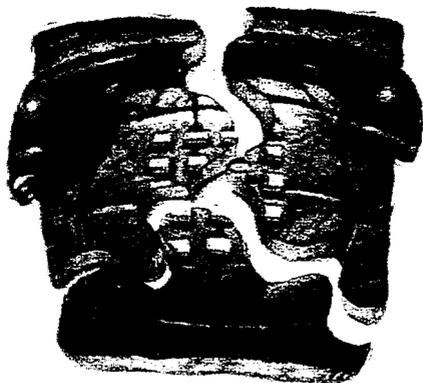

- International origination to US termination.
- Switched or dedicated access.
- No monthly service charges.
- Billed in six-second increments with a 30-second minimum.
- Usage contributes to overall commitment.
- Volume discounts.

Options

- Dialed Number Identification Service (DNIS).
- Call Detail Records (CDRs) available through various media, e.g., magnetic tape, CD ROM, electronic file.
- Daily, weekly and monthly frequencies.

1+ Service

TRANSCEND™ SWITCHED SERVICES

Transcend 1+ Service is a fully integrated long distance service which provides end-to-end 1+ call origination and termination.

Transcend 1+ Service provides a network access and transport platform which you can use to design, bill and service your customers.

Switched-access locations are assigned to WorldCom's Carrier Identification Code (CIC). Transcend 1+ Service is compatible with other market applications such as call centers, travel card platform providers and affinity market groups.

Features

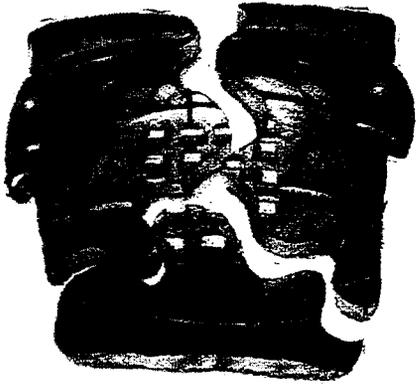

- Worldwide termination to any direct-dialed telephone.
- End user's Automatic Number Identification (ANI) is "PIC'd" to WorldCom, i.e., traffic is automatically routed to the WorldCom network.
- WorldCom domestic transport is billed in six-second increments, six-second minimum per call.
- Local Exchange Carrier (LEC) access and egress charges are billed in one-second increments.
- International charges are billed as a flat rate.
- Target-marketing potential can result in lower overall costs and greater market penetration.
- Updated monthly LEC Tariff Database provides vital information to better manage your business and control profit margins.
- Monthly application of LEC tariff reductions results in reduced access costs.
- Primary Interexchange Carrier (PIC) status reporting, account activity reports and electronic order entry via the WorldCom Electronic Data Exchange (EDE).
- Directory assistance.
- Term and volume discounts.

Options

- Call Detail Records (CDRs) available through various media, e.g., magnetic tape, CD ROM, electronic file.
- Daily, weekly and monthly frequencies.
- 1- to 8-digit account codes.

Termination Service

TRANSCEND™ SWITCHED SERVICES

Transcend Termination Service provides a cost-effective solution for terminating traffic that originates on a carrier's network.

Dedicated-access locations are connected to WorldCom's nearest Point of Presence (POP) via T-1 access. Termination is available for US and international traffic.

Features

- Worldwide termination to any direct-dialed telephone.
- WorldCom domestic transport is billed in six-second increments, six-second minimum per call.
- Local Exchange Carrier (LEC) access and egress charges are billed in one-second increments.
- International charges are billed as a flat rate.
- Target-marketing potential can result in lower overall costs and greater market penetration.
- Updated monthly LEC Tariff Database provides vital information to better manage your business and control profit margins.
- Monthly application of LEC tariff reductions results in reduced access costs.

- Rates FOB to the nearest WorldCom POP.
- T-1 access only; minimum usage charge per T-1¹.
- Directory assistance.
- Term and volume discounts.

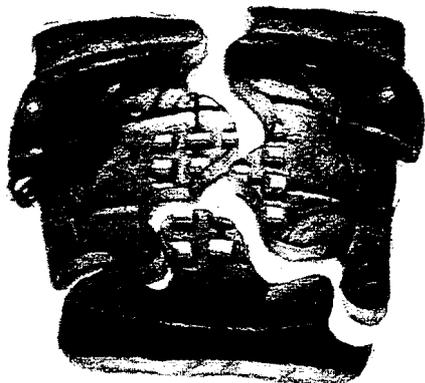

Options

- Call Detail Records (CDRs) available through various media, e.g., magnetic tape, CD ROM, electronic file.
- Daily, weekly and monthly frequencies.

¹ Usage may be averaged for multiple T-1s and aggregated with Toll Free Origination Service to determine if T-1 minimum usage requirements are met.

Toll Free Service

TRANSCEND™ SWITCHED SERVICES

Transcend Toll Free Service provides end-to-end call origination and termination. Traffic is originated from anywhere in the United States, Puerto Rico, the US Virgin Islands and Canada for termination to your end user's premises equipment.

Transcend Toll Free Service is priced the same as outbound—no premiums. WorldCom can provide full-service management of all toll-free features and applications you use.

Features

- Intrastate rates are standard carrier intrastate tariffs.
- WorldCom domestic transport is billed in six-second increments, six-second minimum per call.
- Local Exchange Carrier (LEC) access and egress Charges are billed in one-second increments.
- International charges are billed as a flat rate.
- Target-marketing potential can result in lower overall costs and greater market penetration.
- Updated monthly LEC Tariff Database provides vital information to better manage your business and control profit margins.
- Monthly application of LEC tariff reductions results in reduced access costs.
- Call-blocking from designated Numbering Plan Areas (NPAs).
- Term and volume discounts.

Switched Access

- Toll-free service delivered to end user's Automatic Number Identification (ANI).
- Account activity reports and electronic order entry via the WorldCom Electronic Data Exchange (EDE).

Dedicated Access

- Toll-free service delivered to T-1 between end user's premises equipment and nearest WorldCom Point of Presence (POP).

Options

- Dialed Number Identification Service (DNIS).
- Real-time ANI delivery.
- Call Detail Records (CDRs) available through various media, e.g., magnetic tape, CD ROM, electronic file.
- Daily, weekly and monthly frequencies.

Toll Free Origination Service

TRANSCEND™ SWITCHED SERVICES

Transcend Toll Free Origination Service allows your customers to originate toll-free calls on the WorldCom network from anywhere in the North American Numbering Plan (NANP).

With Transcend Toll Free Origination Service, you provide termination to your end user's premises equipment.

Features

- Intrastate rates are standard carrier dedicated-access tariffs.
- WorldCom domestic transport is billed in six-second increments, six-second minimum per call.
- Local Exchange Carrier (LEC) access and egress charges are billed in one-second increments.
- International charges are billed as a flat rate.
- Target-marketing potential can result in lower overall costs and greater market penetration.
- Updated monthly LEC Tariff Database provides vital information to better manage your business and control profit margins.
- Monthly application of LEC tariff reductions results in reduced access costs.

- T-1 access only; minimum usage charge per T-1¹.
- FOB to the nearest WorldCom Point of Presence (POP).
- Call-blocking from designated Numbering Plan Areas (NPAs).
- Term and volume discounts.

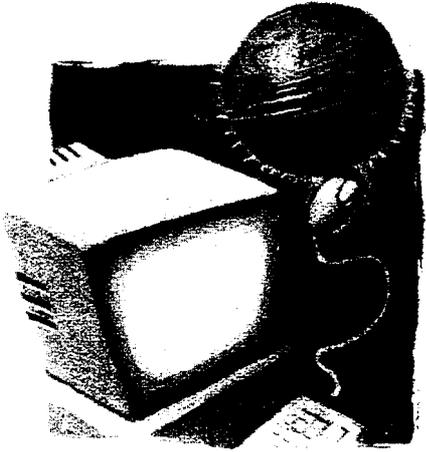

Options

- Dialed Number Identification Service (DNIS).
- Real-time Automatic Number Identification (ANI) delivery.
- Toll-free management service.
- Call Detail Records (CDRs) available through various media, e.g., magnetic tape, CD ROM, electronic file.
- Daily, weekly and monthly frequencies.

¹ Usage may be averaged for multiple T-1s and aggregated with Termination Service to determine if T-1 minimum usage requirements are met.

Electronic Data Exchange

SUPPORT SERVICES

Electronic Data Exchange (EDE) interface allows you to transmit orders from your desktop directly to our provisioning system in as few as thirty minutes.

After you have uploaded your files, we perform several error checks before loading our billing system and our switches. From there, the data is sent electronically to either the Local Exchange Carrier (LEC) or the national Service Management System (SMS), depending upon the nature of your order.

WorldCom's EDE interface speeds order completion. On average, 91% of your LEC orders are completed within one business day, and 99% within five days.

Features/Benefits

- *Rapid revenue.* The sooner orders are processed, the sooner you acquire another source of revenue.
- *Flexibility.* You may add, delete or change Automatic Number Identification (ANI) digits, account codes and toll-free numbers when necessary.
- *Convenience.* Enter orders from your site using your equipment.
- *EDE Bulletin Board System access via a personalized code* so you can upload orders instantly with peace of mind.
- *E-mail capability through the Bulletin Board System to WorldCom employees* for quick, responsive service.
- *24-hour-a-day availability* for maximum convenience.

Electronic Data Exchange Manager

SUPPORT SERVICES

Electronic Data Exchange (EDE) Manager is a WorldCom-developed, PC-based order-entry software package that serves as a front-end customer interface to WorldCom's EDE process.

EDE Manager is a user-friendly, menu-driven system that can process large numbers of orders with speed and accuracy.

Applications

- Automatic Number Identification (ANI) and basic toll-free EDE processing.
- Automatic EDE formatting.
- Monitoring the status of orders with the appropriate Local Exchange Carrier (LEC).

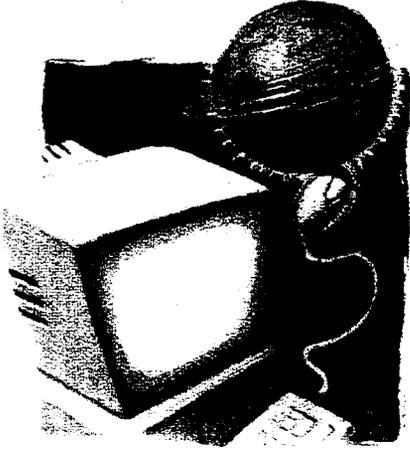

Features/Benefits

- *Automatic EDE formatting* by designating required fields for ANI and toll-free services.
- *Elimination of format errors* for faster processing and faster turn-up.

- *24-hour-a-day availability* for maximum convenience.
- *Customer programming not required* for maximum efficiency.
- *Upgrades provided at no additional charge* so you can get the most out of this capability.
- *EDE Bulletin Board System access via a personalized code* so you can upload orders instantly with peace of mind.
- *Interoperability with IBM mainframes, IBM AS/400s and IBM-compatible PCs* for convenience and cost-effectiveness.
- *Report/Query-creation capabilities* for retrieval of important information.

Electronic Daily Call Detail Records

SUPPORT SERVICES

Electronic Daily Call Detail Records (CDR) provide detailed information through electronic access rather than tape.

CDRs are provided on the Network Data Mover (NDM) Connect Direct platform. You can access the system 24 hours a day, and CDR information is available within 36 hours of toll activity. Access is available via a frame relay connection.

Month-end detailed information for reconciliation is provided at no charge. Data is sent either directly to you or to your certified billing company.

Features/Benefits

- *NDM support* provides industry-standard software and hardware for easy turn-up.
- *Daily transmissions* for increased cash flow through rapid access to billing information.
- *Electronic access* which eliminates the need for tape handling.
- *Daily files delivered each morning by 9:00 a.m. CST* for consistency in processing call records.

Carrier Identification Code Translation

SUPPORT SERVICES

Carrier Identification Code (CIC) Translation is a translation-based network access method.

Through the Local Exchange Carrier (LEC), your customer can designate the WorldCom network for the routing of all calls associated with your CIC.

Applications

- Customers who originate calls in the LEC areas on their CIC and have the LEC route traffic toward WorldCom's feature groups.
- Customers with a need to build name equity.
- *WorldCom-provided coordination between the carrier and the LEC* frees your internal resources to concentrate on your core business.

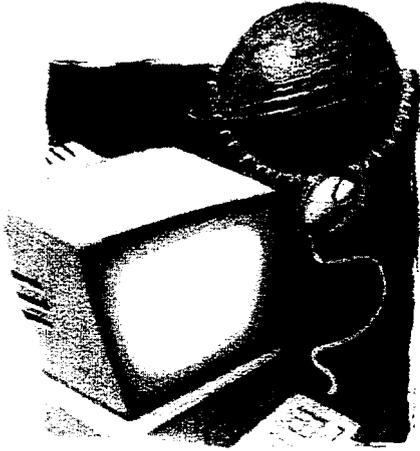

Features /Benefits

- *End user is "PIC'd" to your CIC (traffic automatically routed to the WorldCom network)* so the end user and the LEC recognize you as the provider of service.
- *Nationwide availability* allows you to target marketing campaigns to specific locations during specific time frames.
- *No network investment required:* you can rely on WorldCom's established backbone network for quality transmission.

CIC Translation is available to both WorldCom Classic and Transcend™ Switched Services customers.

Universal Communications Interface

SUPPORT SERVICES

Universal Communications Interface is an electronic service that simplifies communication, ordering and reporting by putting control in your hands.

A frame relay interface enables you to view, add and update trouble tickets (switched and private line) and switched orders. It also gives you immediate access to toll-free, frame relay and Dedicated Access Line (DAL) utilization network management reports.

Universal Communications Interface enhances your operating efficiency by providing rapid, reliable processing of timely, concrete information.

Applications

- Generating, viewing and modifying switched and private line trouble tickets and switched 1+ service orders.
- Modifying enhanced toll-free routing structures.
- Accessing toll-free, frame relay and DAL utilization network management reports.
- Tracking trouble tickets and switched 1+ orders.
- *Mass Automatic Number Identificaton (ANI) ordering capability* maximizes your revenue potential.
- *Universally compatible software* eliminates additional investment in equipment.
- *Windows®-based order-entry capability* for easy, efficient processing.
- *Direct trouble-ticket tracking and reporting* so problems may be resolved faster.
- *Maximum security* to protect your data.
- *Uses the same frame relay circuit as WorldCom's Electronic Call Detail Record (CDR) Delivery service* for greater efficiency.

Features/Benefits

- *Near-real-time switched 1+ ordering capabilities* for faster generation of revenue.
- *Connectivity via frame relay* for maximum speed and reliability.
- *Customer Controlled Reconfiguration (CCR)* allows you to modify enhanced toll-free routing structures (call trees) from your desktop.

Operator Services Branding

SUPPORT SERVICES

Operator Services Branding provides basic operator services along with the value-added feature of company identification, with which your company can be identified as the long distance provider.

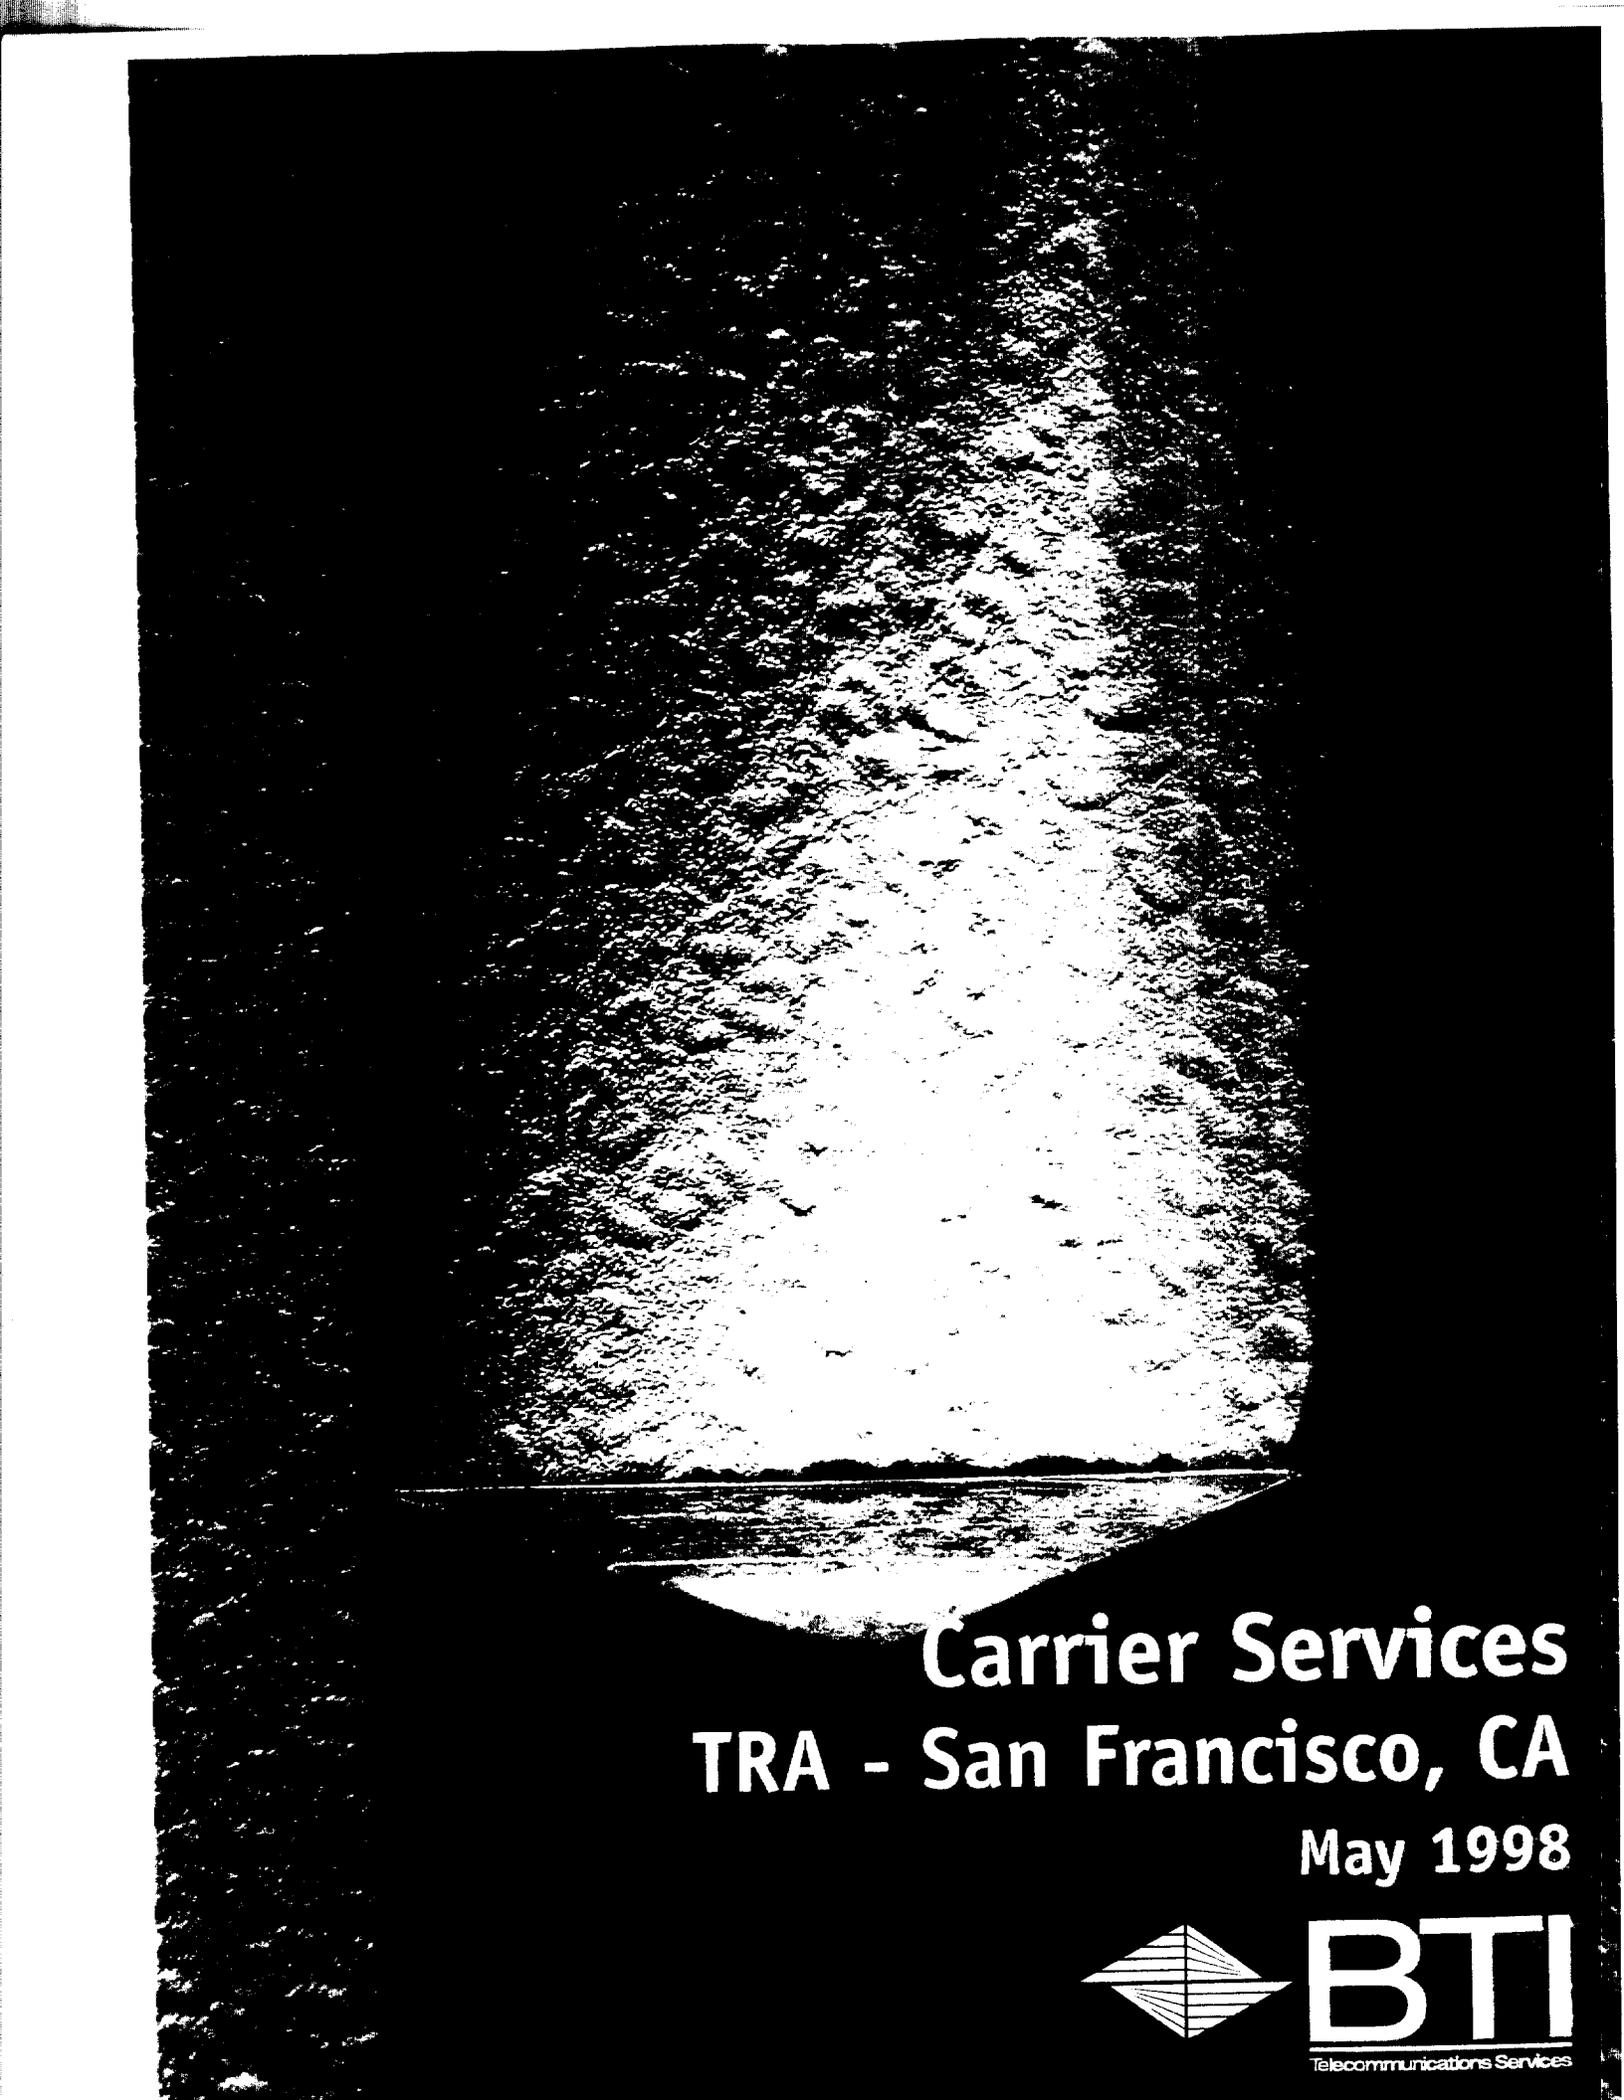

Operator Services Branding is a low-cost, custom feature which greatly enhances your perception among your customers.

Applications

- Regional carriers with end users who place "O" calls: collect calls, third-number calls, Local Exchange Carrier (LEC) calling-card calls, and person-to-person calls.
- Resellers with a need to increase name equity.

Features/Benefits

- *Switched and dedicated-access "O" traffic* enables you to service any size end-user account.
- *Full-service, round-the-clock operator functions* allow you to present a full-service image to the end user.
- *Dual branded* so the end user knows who is providing the operator services.

Smarter. Faster. Better.™

Carrier Services

BTI's Carrier Services is built around network integrity, quick call set-up times, billing accuracy, and of course, competitive prices. These are just a few of the important issues that arise when selecting your interexchange carrier. Where can you find a telecommunications company that can give you the right network for all these issues. Simple! BTI Carrier Services!

BTI is a privately held company that has been providing state-of-the-art network services since 1983. Known as a very agile, innovative, and technologically advanced, BTI is one of the fastest growing telecommunications companies of this decade. The commitment to providing the highest quality, lowest cost network services has helped BTI expand its network and become a nationwide telecommunications services provider.

BTI presently operates a 100% digital fiber optic network, utilizing DCS DEX 600 and DEX 600E tandem switches. These Operations Centers are strategically located in Atlanta, Dallas, New York, Orlando and Raleigh, NC. BTI has fully deployed SS7 signaling throughout the network via a gateway pair of Megahub STP's. If Network integrity is your major concern, look no further. BTI's use of multiple carriers based on individual strengths gives BTI diversity and redundancy second to none.

Contact BTI's Carrier Services Team 1-800-958-9588.

Smarter. Faster. Better.™

Private Line Services

Can't get DS-1 or DS-3 Private Line capacity in a timely manner? Talk to a Representative of BTI's Carrier Services Team about our 3,250 mile Fiber Optic network that spans from New York to Miami and Atlanta to Nashville.

The same company that brings you state-of-the-art switched services can now help you eliminate all those "In Jeopardy" facility orders.

Contact BTI's Carrier Services Team today at 1-800-958-9588.

Smarter. Faster. Better.™

Reseller Services

Selecting a Carrier to provide telecommunications services to your customer base can be quite confusing. Network integrity, order processing, call detail records, billing, customer support, and of course, price, are just a few of the questions that immediately come to mind. Where can you find a Telecommunications company that can rise above the rest in all of these categories. Simple! BTI.

Getting customers turned up quickly, along with timely and accurate Call Detail Records (CDRs) are among the most important aspects in a reseller environment. This is why BTI has designed an electronic order entry system called RORE, or Reseller Order Response Engine. This enables you to enter and check the status of orders electronically. You can access CDRs on a daily, weekly or monthly basis through modem dial-up or Internet access.

With competitive rates for Domestic 1+ Origination/Termination, International Services, Internet Access, Paging and Travel Cards, your costs will be at a minimum allowing you to offer your customers some of the lowest rates available.

A dedicated Carrier Support Team is ready to respond to all your needs 24 hours a day, 365 days a week. This support group is trained to handle order entry, billing issues, trouble response, or any of telecommunications services BTI provides.

Contact BTI's Carrier Services Team today at 1-800-958-9588.

Smarter. Faster. Better.

Switched Services

BTI provides 1+ Domestic Origination and Termination services on 100% digital fiber with fully deployed SS7 signaling throughout the network. In addition, BTI provides International Termination services worldwide.

LATA based Termination services provide customers with the lowest possible terminating rates by utilizing our own network from the Northeast to the Southwest. With interconnectivity to our DEX 600 and 600E switches located in New York, NY., Raleigh, NC., Atlanta, GA., Orlando, FL. and Dallas, TX., cost reductions are only a cross-connect away.

With a fully deployed SS7 network, and vast BTI owned and operated FGD access facilities, 800 Origination services are second to none for call set-up and reliability. BTI also offers RespOrg services through our experienced SMS group.

International Termination services are provided through all five of BTI's switching facilities. Utilizing multiple carriers allows BTI to provide the highest quality and lowest cost international termination to all our customers.

A dedicated Carrier Support Team is ready to respond to all your needs 24 hours a day, 365 days a week. This support group is trained to handle any facility or network troubles, billing issues, facility provisioning and implementation, or any of the Telecommunications services BTI provides.
