Dear FCC:

As a recently liscensed HAM, I am requesting that you do not relocate 420-450 MHz\70cm HAM band as it would leave one of my 2 radios nearly useless since it covers both 2m and 70cm with crossband repeater.

I enjoy using the 70cm band for light experiment work in my free time, and linking my handheld to local repeaters via the cross band repeater function when enjoying the outdoors.

Please do not allow the suggested action in document RM-9267, to pass. I am only one of many HAMS who use this band that would be upset if it did pass.

Thank you,

Brian M. Downey
