**VIA ELECTRONIC SUBMISSION**

Ms. Marlene H. Dortch, Secretary  
Federal Communications Commission  
445 12<sup>th</sup> Street, SW – Lobby Level  
Washington, DC 20554

**Re: Protecting and Promoting the Open Internet; Framework for Broadband Internet Services; GN Docket N<sup>o</sup>. 14-28; GN Docket N<sup>o</sup>. 10-127**

Dear Ms. Dortch:

On September 29, 2014, Bill Smith, President of Technology Operations, Bob Quinn, Gary Phillips, and I (all of AT&T) met with the Commission's Chief Technology Officer, Scott Jordan and Antonio Sweet of the Office of Strategic Planning and Policy Analysis. During the meeting, we discussed the above-referenced proceedings.

In particular, we discussed the ability of AT&T business customers to direct the prioritization of certain traffic through the use of protocols like DiffServ. We also discussed prioritization techniques used in the delivery of AT&T's U-verse suite of services. We then discussed how "user-driven" prioritization could be implemented from a technical perspective to empower consumers. For two-way traffic, both the consumer and an edge provider might have to mark traffic for prioritization and, accordingly, the ISP would need to establish the appropriate arrangements with each of them.

Pursuant to section 1.1206 of the Commission's rules, this letter is being filed electronically with your office for inclusion in the public record of the above referenced proceeding. If you have any questions or need additional information, please do not hesitate to contact me.

Sincerely,

Henry G. Hultquist
