

ATTACHMENT A

Walnut Telephone Company, Inc., d/b/a Walnut Communications (“Walnut”), a competitive local exchange carrier (“CLEC”) that serves the areas in and around the communities of Avoca in Pottawattamie County and Persia in Harrison County in southwestern Iowa, hereby responds to a challenge from Windstream claiming that the eight Census Blocks listed below are unserved and should be eligible for Connect America Fund Phase II support.

The eight Census Blocks in question are:

Avoca Area: 191550215021035 191550215021045 191550215022010
 191550215021057 191550215021170 191550215022014
 191550215021054

Persia area: 190852905002089

Walnut has been operating digital subscriber line (“DSL”) facilities capable of serving virtually all of the households and businesses within the listed Census Blocks in the Avoca area since 2004, and copper and coaxial facilities capable of serving virtually all of the households within the listed Census Blocks in the Persia area since 2009.

Walnut is presently engaged in a construction project that will upgrade most of its existing facilities in both the Avoca and Persia areas to DOCSIS 3.0 by the end of December 2014.

Walnut presently provides voice telephony service, plus broadband service at speeds of 10 Megabits per second (“Mbps”) downstream and 1 Mbps upstream throughout all eight Census Blocks, with roundtrip provider network latency of 100 milliseconds (“ms”) or less. Its soon-to-be-completed DOCSIS 3.0 upgrade will permit it to offer broadband services at downstream speeds in excess of 100 Mbps and upstream speeds in excess of 50 Mbps, in addition to voice telephony services. Walnut imposes no usage limitations or allowance on its broadband service at this time, and has no present plans for imposing any during the future.

Walnut presently passes 647 homes in the Avoca area, where it presently serves 371 Internet access connections, 275 single-line residential telephone customers, 21 single-line business telephone, 169 multi-line business telephones and one Primary Rate Interface (PRI) trunk. Walnut presently passes 137 homes in the Persia area, where it presently serves 28 Internet access connections, 35 single-line residential telephone customers, 2 single-line business telephone customers, and 2 multi-line business telephone customers.

Walnut competes with Windstream in the Avoca and Persia areas, and also with MCC Iowa LLC in the Avoca area. Walnut does not receive any federal high-cost support for its network and operations in the eight Census Block area.

Also provided as Attachment A are copies of advertisements for Walnut’s services in the eight Census Block area.

|------------------------------------|--------|

Prices shown do not include regulatory fees and taxes. If only one service is chosen (phone, internet or cable), a \$50 installation charge will apply. If a bundle is chosen, installation charges are waived. Excessive wiring and/or changes requested by the customer may result in a \$80/hour, plus materials charge. You will be given a quote for installation of additional work that you will need to sign prior to our techs providing additional lines at cost. All services may not be available in all areas. Speeds listed indicate potential download speed of service. Upload speeds will be less than download speeds and vary based on product delivery. Internet-only customers in Walnut will be charged a different rate than shown. Contact our office for details. Digital & DVR w/FREE HD and Movieplexes require a set top box in order to receive channels. Walnut Communications reserves the right to alter Unlimited Nationwide Calling at anytime if abused.
