Adoption of net neutrality is needed greatly to make the Internet the free exchange it could be. Proper regulation would account for citizens privacy and hold companies accountable for the potential leaking of that information (similar to the net neutrality rules in Brazil). Please afford us the greater liberty as consumers and citizens. Competition doesn't exist under the corporations that govern our Internet traffic and access in your stead. Please show that you can represent and advocate for citizens by allowing for something greater than what we currently have. Support Net Neutrality and be of the people as opposed to corporations (who regardless of citizens United are not people, at least not the way people are people). Please represent us in your decisions, the citizen, not the corporation.
