

60000987759.txt

I would like to see ISP's reclassified as common carriers, meaning that they are not allowed to discriminate against any certain data they send or receive.

Also, I would like to see a lot of the large ISP's split up under some Anti-Trust effort. There is too little competition in Internet Service Providers in America, meaning price fixing and collusion is very much possible and most likely is already happening.

Thank you for reading.
