I support net neutrality because the internet is like the air we breath, the light that surrounds us, and the earth that supports us - it flows and ebbs with what content is within it. Comcast and other internet providers already charge too much just to deliver the service to the user, let alone to be allowed to then take in more profits by controlling the content delivered by their service. Americans are loosing more and more of the country they love and hold dear each day to the self fish, corrupt and non-compassionate corporate monsters. Please do not take one of the only things left to the masses to enjoy as it is delivered. Corporations already control the media, the press, the airwaves, the economy, and so much more. The American People will not stand for this greedy corporate takeover of the internet we hold so dear for the freedom it gives the masses.
