Andrew L. Sullivan asks the question: "who is ultimately responsible for the security of the Wi-Fi network?"

The question is probably important in some context, but has nothing to do with this proposal.

You may ask: "Who is responsible for traffic safety?"

Would the answer be to shove cars off the road or deflate their tires, if they don't pay an access fee?

All have equal rights to public infrastructure. If you want complete security, build your own network using a licensed spectrum.

Next thing you know, we will have corporations taking over public park swings, and pushing kids away who won't give them their lunch money. All in the name of swing safety.

Respectfully submitted,

Steve Sampson, K50KC
