Please protect the internet from Comcast, TWC, etc. because I have learned quite a bit about the world from the internet. It is a very helpful tool for learning about something I didn't know before like "net neutrality." I just watched two YouTube videos explaining to me what net neutrality, and here I am now posting a comment on your website to protect it. Hence the usefulness of net neutrality. Also, if you don't protect net neutrality, it will also affect yourselves and Congress if both of you use any of the services being affected by the FCC voting against net neutrality, which in turn could cost you all your jobs. Just something to think about before voting.

One last thing that will happen is the stifling of innovation in this country if you don't protect net neutrality. Small business owners rely on the internet for advertising, employing people, and other things. If small business can't pay whatever the cable companies are going to charge, then the traffic to their websites gets drastically slowed down, business to their stores slow down, and ultimately they get put out of business. REAL UNEMPLOYMENT (Not the labor force participation rate the administration is currently touting as unemployment) is currently around 20-25%. Do you all plan on making unemployment 25-30% possibly 30-35%? 'Cause that's exactly what's going to happen if you vote against net neutrality. Again, just some things to think about before doing the vote.
