I do believe that Net Neutrality is in the best interests of the American people. One of the best things about the United States of America is our Free Enterprise system. It allows any citizen - no matter how rich or poor - to follow our dreams, no matter how big or small those dreams might be. The internet, as it is now, allows anyone to create, program, or build upon their dreams to make them a reality through the use of websites, kickstarters, or even streamed video sites such as youtube. If the big corporations are the only ones in control of the internet, they will soon develop a monopoly.

As Jean Fogler stated in her article: "Are there regulations against monopolies?" She eloquently stated "A monopoly is characterized by the absence of competition, which can lead to high prices and inferior products and services. Governments attempt to prevent monopolies through the use of antitrust laws. In the United States, antitrust laws include the Sherman Antitrust Act of 1890 and the Clayton Antitrust Act of 1914. Today, these Acts are enforced by the Federal Trade Commission (FTC) and the Anti-trust Division of the United States Department of Justice (USDOJ).

"Anti-trust laws prohibit practices that restrain trade, and apply to all industries and the various levels of business, including manufacturing, transportation, distribution and marketing. The anti-trust acts address such topics as price discrimination, price fixing and other unfair business practices. The laws are intended to preserve competition and allow smaller companies to enter a market, and not to simply suppress strong companies."

The government sets up laws and regulations to protect the people both in the form of free speech but also in free enterprise, without fear of monopolies. By destroying Net Neutrality they will be destroying not only free enterprise, but help in creating those monopolies that will take advantage of the people that they swore to protect.
