Re: WC Docket No. 10-90; Hughes Network's Satellite Broadband Service

Dear Ms. Dortch:

In order to supplement the record in the Connect America Fund ("CAF") proceeding (WC Docket No. 10-90), Hughes Network Systems, LLC ("Hughes"), submits the enclosed press release issued on January 21, 2015. The press release details updated HughesNet<sup>®</sup> Gen4 Internet service plans, which will further speed downloads and improve the web browsing experience for customers.

This demonstrates how satellite broadband services, such as HughesNet<sup>®</sup> Gen4 broadband service, are increasingly leveraging new technologies to bring advanced broadband services to consumers. As the Federal Communications Commission moves forward with implementing the CAF, it is critical that it recognizes how new technologies make satellite broadband "capable of meeting consumer demands for 21st century networks,"<sup>1</sup> and accordingly, an important part of providing broadband to unserved Americans.

---

## **New HughesNet Gen4 Plans Boost Speed and Efficiency with Innovative SmartTechnologies**

*Enhanced Browsing, Downloading and Data Usage Management  
Keep Customers Connected Smoothly and Easily*

**Germantown, Md., January 21, 2015**—[Hughes Network Systems](#), LLC (HUGHES), the global leader in broadband satellite solutions and services, today announced a full array of updated HughesNet® Gen4 service plans featuring a new generation of performance-enhancing innovations in downloading, browsing and data usage management.

The Gen4 plans with Hughes SmartTechnologies™ let customers do more of what they want online without interruptions or running over their monthly data allowances. Drawing on Hughes' decades of experience in satellite technology and service delivery, SmartTechnologies improve data compression, website loading, and media download speeds. The new Gen4 plans also dramatically increase Bonus Bytes to 50 GB/month, giving customers even more options for staying connected.

“Hughes invented satellite Internet and is constantly innovating to enhance our customers' online experiences,” said Mike Cook, senior vice president, Hughes. “As the clear market leader, with over a million active users in North America, we strive to make HughesNet the best solution for people to enjoy all the benefits of high-speed Internet access no matter where they live or work—even in exurban and rural areas with limited terrestrial broadband.”

The SmartTechnologies suite consists of four tools—SmartFetch™, SmartCompression™, SmartBrowsing™ and SmartResources™—that compresses data more efficiently, speeds downloads, improves web browsing, and helps the subscriber optimize their data usage. Three SmartTechnologies tools automatically manage data handling in the background for maximum user convenience. The fourth, SmartResources, shows customers their data allowance and enables them to add data to their plan with tokens if they see they're going to need more bandwidth.

- **SmartFetch:** speeds website loading by reducing the number of “hops” needed to retrieve content.
- **SmartCompression:** shrinks web data by up to 30 percent so subscribers can download more content while using less of their data allowances.

**-More-**

## New HughesNet Gen4 Plans Using SmartTechnologies, page 2

- **SmartBrowsing:** allows subscribers to continue emailing and browsing even if they exceed their monthly data allowance. SmartBrowsing is available in designated areas and on select service plans.
- **SmartResources:** puts the user in full control of their bandwidth management. Status Meter shows monthly data allowance at a glance and notifies SmartBrowsing users when the service kicks in.
