

These comments are in response to the February 4, 2015 filing by Shure Incorporated.

Please disregard Shure's proposal. Professional sound people need 250mW on UHF devices. Also, please raise the limit of VHF devices to 250mW.

Finally, I ask the Commission to set aside revenue from any subsequent 600 spectrum auctions to compensate individuals who own devices that operate in the 600 spectrum (or to subsidize manufacturers who offer re-blocking services for these devices).

Thank you for your consideration.
