Net neutrality. No to any and all agreements with private businesses. We cannot protect you if you give in to private contracts. You should be regulating requirements and demands of faster internet services. Like you are required a minimum of 500 Megabytes minimum for any kind of such agreed services an only for a limited time of a 7 year term. Any violation or reduction of services is punishable by loss of services in a city. They would be forced to leave the city. Once gone any other company can move in to take service.

The loss of their bad services would shut them down from any monopoly over internet services in areas. So at this time. NO agreements by Comcast or Time Warner or any possible organizations.
