Form 477 places undue burden on small ISPs.

We are a small Wireless Internet Service Provider in Madison County, NC. We are providing wireless Internet to a very rural and topographically difficult area. We are not the recipient of any grants yet we provide the service at a very reasonable price. We have no full time staff, just me.

We have no problem sending the FCC the area that we serve and a list of addresses of current customers.

However it is exceedingly confusing, expensive, and time consuming to provide the FCC this information the way it's currently mandated. We are not census experts, programmers, database analysts, or lawyers, we are Wireless Internet Service Providers and really should be working on providing Internet, not losing days of time trying to put this together for the FCC.
