Question: II.A.8

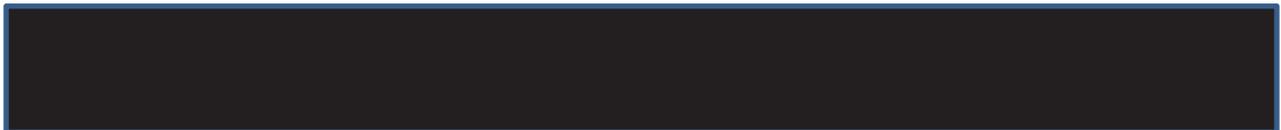

Explain your business rule(s) used to determine whether to build a *Connection* to a particular *Location*. Provide underlying assumptions.

- a. Describe the business rules and other factors that determine where you build your *Connections*. Examples of such rules/factors are minimum *Term Commitments* or minimum capacity commitments by the buyer; maximum build distances from the building to your core network; and/or number of competitors in the area. Include, also, any factors that would prevent you from building a *Connection* to an otherwise suitable *Location*. These could be factors that are under your control or those that are not.
- b. Explain how, if at all, business density is incorporated into your business rule, and if so, how you measure business density.
- c. In areas where your business rule has been most successful, explain why. Provide examples of geographic regions (if any) where you generally were or are able to successfully deploy *Connections*, and where you generally have experienced or currently experience serious difficulties in deploying *Connections*, and, if you are able to provide examples of both kind of regions, indicate what distinguishes these different regions.
