I do not support net neutrality. The internet providers have monopolies in virtually every household and they strong arm Americans into paying whatever fees they desire because people have no other choice. It is against my constitutional right to liberty and freedom.

Furthermore the service they provide is horrible at best. They offer shared internet and tv access while charging you full price. The speeds are consistently below quoted and make it virtually impossible to run a business or even get access to basic information on the web. Most states require taxes to be filed electronically and yet no state cares about making sure people can even get internet access. There needs to be more competition not less.
