

Obama Might think about having government military technition develope web browser; of which all laws of United states postal service delivery (USPS) of information laws will apply. In this all privacies will apply; Including and email system Making a secure browsing experiance; with privacy; like not opening the letters and observing street communications and Writtings; or keeping recordings until and unless a warrent; thus and having the ability to freely Bring to attention Justice upon mischief or fraud, and help secure the trust of the people.

There is millions of people if the browser is done properly would like that security; and privacy; that the Government can provide; and fund it by advertisements each click a little 1.25x 1.25 inch block it must be funded or a line in the browser bar such as the line as the NY stock exchange His and lows. A from of Tor.

Its should be Just like the us Mail service. With a VPN type of encription, the only thing that is known is the senders address and the recievers address. Just like the mail system, all comments and writtings or private; and nothing is recorded until a warrent; unlest posted on a post board; just like the U.S.P.S. Mail system. The people trust the postal service in most cases for the most part and this is your in. Because of the laws and regulations and privacy. More than most browsers and email systems can say. I choose military technitions because they are already on pay roll and it will not cost anything more to develope it.
