To whom it may concern or be received by at the FCC office,

A very old GMRS Rule needs to be amended to support today's current digital technology to provide efficient Personal Family Communications for GMRS Licenses.

This petition asks the commission to strongly consider to amend this section of the rule for GMRS Licensees to be allowed to use the digital voice emission type below which has become a very popular, narrow band compliant, efficient and affordable communication method in today's world of radio technology. Even though GMRS is not coordinated for repeater stations on the currently 8 allocated frequencies used for this service, it is very much needed to be a option for GMRS users to be able to use digital technology that is available in radios made today. This change would allow current licenses to use better, eco friendly, affordable, efficiently with technology made available to us all today. This would increase the public interest of this Personal Family service with more new licenses.

Part 95

§95.631 Emission types. Lines a and e

Requested Emission type to be added- 7K60FXE 2-slot
DMR TDMA voice

frequency outputs of 462.5500, 462.5750, 462.6000, 462.6250, 462.6500,
462.6750, 462.7000 and 462.7250. And duplex frequency inputs 467.5500,
467.5750, 467.6000, 467.6250, 467.6500, 467.6750, 467.7000 and 467.7250.
