Our LPFM in metro New Orleans is in favor of allowing LP100 stations to upgrade to LP250 stations in densely populated communities. There are several tall buildings nearby creating propagation issues for our LP100. Also, an increase to 250 watts will allow our station's programming to reach the edge of central city New Orleans, a community in need of a positive, life-changing and hopeful messaging. We are grateful the FCC is considering LP250.
