I live in Wyoming and support our local college station and Wyoming PBS (I have cable). I love local programming and feel its vital to our health as a community. But I was disheartened to learn that in Wyoming, 18 of our 23 counties cannot receive local in state stations via satellite. My County included (Park Co.) In 2008, 89 Wyoming legislators signed a resolution encouraging Congress to change the law to require mandatory satellite carriage of instate stations to all the state's citizens. Unfortunately due to lobbying by satellite companies, that didn't happen. This needs to change and you have the power to do it. Wyoming people deserve to watch in-state stations for local info. STELAR in it's present form is very negatively impacting localism and both commercial and non-commercial local stations should be treated the same, and carried on satellite.
