I am writing in support of increasing the radio signal for 96.5 WTDA-LPFM. This area is very rural and often times this radio station is our only source of Emergency information. When the tv satellites go down (as they often do) we know that we are able to connect to our community using WTDA. In addition, the station provides PSA regarding services provided by various government agencies. Many people would be without that information if not for 96.5 WTDA. I strongly encourage the FCC to support this increase in signal.
