KWSV-LP has been operating in Simi Valley since March 13, 2015. We have received complaints from our listeners that our signal is difficult to hear inside homes and buildings. We continue to hear that KWSV-LP is being received well in cars but not in dwellings. We believe this to be an issue of enough power within the coverage zone. Please seriously consider the request before you to increase LPFM maximum power from 100 watts to a maximum of 250 watts. We believe an increase to 250 watts will give us the minimum needed to reach our listeners in their homes and business within our coverage area.

Sincerely,

John Taylor
President, KWSV-LP Simi Valley, California
