Regarding the consideration of increasing LPFM power to 250 watts, this increase would be a tremendous asset to my community. In particular my community is much larger than my contour at 100 watts. Specifically the heavy populated eastern side of my contour can not be reached effectively with the current LP power. Increasing the LPFM power to 250 watts would permit my entire community to take advantage of the local non commercial programming and alerting. Permitting this power increase would benefit my community directly by providing an effective alternative to highly commercialized broadcasters whose goal is increasing advertising dollars whereas the Local LPFM station only serves the community without the listener burden paid advertising.
