Increasing the power authorization for LPFM stations would be extremely beneficial. The ability to serve a broader community through either better reach or with better penetration helps the community voice reach the intended audience and supports the FCC's goal of helping bring a LOCAL voice back to the local community. For KUBU-LP in Sacramento, the ability to pick up even a few miles of core/fringe power would reach out of our downtown area better, push through downtown tall buildings better, and to reach outlying suburbs that area currently unserved by a 5-mile radius zone. I encourage you to approve the proposed power boost.
