I believe that raising the power level to 250 watts would better enable the local community radio station to serve the community. Most likely it would enable all people in the community to hear the station versus just some of them. We only have about 20,000 people in this local community, and it is only a few square miles, yet many people cannot get the signal in their home. Additionally, the local station has purchased emergency broadcasting equipment in case of a weather emerg. ALL residents of the community need to hear that!
