

60001078256.txt

Our station serves a rural community that has difficulty receiving our signal due to the hills and valleys of the terrain. With the 351 meter HAAT reduction of our power limit to 1 Watt ERP, we cannot reach a large portion of our designated local audience. The local community depends on our broadcasts for emergency information, such as fire reports. Our station and our community would benefit from a power increase as proposed in RM-11749.
