I'm writing to express support for adoption of RM-11749. As someone who lives on the outskirts of Raleigh, NC, the ability of LPFM stations to increase power outputs from 100 to 250 watts would have a direct, positive, and significant impact in my area. While currently we are unable to access the signal of any existing LPFM station, it's my understanding that the increase from 100 to 250 watts will make it possible for people in my neighborhood to listen to as many as six LPFM stations (WHOA, WKRP, WPFY, WRLY, WSMU, and a station to be operated by our local Knights of Columbus branch) currently on-air or preparing to launch. I would very much like to have greater ability to hear new voices such as those proposed by these new LPFM stations, and I hope the FCC will adopt RM-11749 and allow these and other stations nationwide to reach out to more people. Thank you.
