I believe the minimum ERP for USA LPFM stations should be increased to 250W. Critical information and local programming does not extend far enough out to many cities which cover over a 10 mile diameter. At best, the present 100W ERP limit would only be marginally covered in these areas. Also, the proposed increase in ERP does not significantly impact the LPFM station. Most antennas, transmission lines, rf amplifiers already have the capability to reach 250W ERP.
