

60001081096.txt

On behalf of myself and my colleagues at WAY0-LP in Rochester, New York we are submitting comment in support of the petition for rulemaking discussing the increase low-power FM station's operating power to 250 watts. Increasing low-power FM stations to 250 watts will:

- help improve signal quality within the existing LP-100 service area (this is our huge selling point on this version of LP-250)
- help improve service by reaching some less populated areas.
- give LPFM stations more flexibility to move their station, obtain translators and boosters as well works towards a more level playing field between LPFM and translators.

Thank your for your consideration of these comments.
