On behalf of WXNA-LP Nashville: LP250 will help improve signal quality within the existing LP-100 service area and extend reach to less populated areas.

Given the rapidly increasing commodification of NCE licenses, strong local LPFM signals are of growing importance in providing radio relevant to the local public interest. College and community-focused frequencies continue to be sold to consolidators and LLCs who value profit over community interest, comparing these NCE licenses to "beachfront property" (Public Radio Capital/Public Media Company). Strong local LPFM signals can fill this subsequent void of local public community radio for all.
