I support an increase in the protected service contour for LPFM radio stations from 3-1/2 miles to 4-1/2 mile radius, and allowing 100-watt LPFM stations to move up to 6.9 miles (11.1 km) as a minor move. Our station, WIDE-LP, has been struggling for 6 years to find a permanent home within 3-1/2 miles of our current temporary location. We also have a problem of intrusion from a 50,000 watt station in Milwaukee at our frequency, 99.1 FM, that I believe an increase in power to 250 watts would help.
