

60001083433.txt

KVCB-LP is a high school radio station. The students work extremely hard to present meaningful and entertaining programming for our local community. However, in the real world of trees and buildings and a hilly terrain, we deal with significant penetration issues that make it impossible for some of our home listeners to tune us in within our service area.

These young broadcasters deserve the opportunity to serve their community with the most reliable signal within the reasonable limits that this petition addresses thoughtfully and commendably. We strongly support this LP-250 upgrade proposal.
