Re: Keeping Telecom Competitive

We write to support the ongoing efforts of the Federal Communications Commission to preserve and promote competition within the telecommunications marketplace. We do so because competitive telecom creates cost and efficiency savings as well as providing improved service. Competition contributes to industry growth, new jobs, and typically results in cost savings and convenience for the consumer.

At most of our business locations, the only viable “last mile” network connection continues to be the one provided by the incumbent provider. Competitive providers, like Granite Telecommunications, LLC, depend on those connections to serve us and many other business customers like us. Without competitive access to these connections, the monopoly once held by the incumbent providers over the business market would be restored.

We wholeheartedly embrace a transition to new technologies, including internet protocol. However, the transition should not be used as a basis to re-monopolize the telecommunications market. We support a determination by the FCC that will ensure that we will have competitive choices regardless of the technology transition taking place.

Very truly yours,

Miles E. Jones

We write to support the ongoing efforts of the Federal Communications Commission to preserve and promote competition within the telecommunications marketplace. We do so because competitive telecom creates cost and efficiency savings as well as providing improved service. Competition contributes to industry growth, new jobs, and typically results in cost savings and convenience for the consumer.

At most of our business locations, the only viable "last mile" network connection continues to be the one provided by the incumbent provider. Competitive providers, like Granite Telecommunications, LLC, depend on those connections to serve us and many other business customers like us. Without competitive access to these connections, the monopoly once held by the incumbent providers over the business market would be restored.

We wholeheartedly embrace a transition to new technologies, including internet protocol. However, the transition should not be used as a basis to re-monopolize the telecommunications market. We support a determination by the FCC that will ensure that we will have competitive choices regardless of the technology transition taking place.

Very truly yours,
