I am the Program Director and deejay for WGLU-LP 106.1FM. I'm asking that you consider increasing from 100 watts to 250 watts. We have found that the radio signal often isn't even strong enough to allow others to listen in our town of license. We are trying to increase our listener base and 250 watts is almost necessary to get others to check out 106.1FM. We have new people who are interested in partnering with us and the increase in wattage would be enough to get them on board.
